Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. § 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 36-40 are rejected under 35 U.S.C. § **102(e)** as being anticipated by Hsieh et al. patent number 5,969,750 referred hereinafter "Hsieh".

As for claim 36, Hsieh teaches a configuration vision processing system for connection to a personal computer (PC) see figure 5, the configurable vision processing system comprising:

A local peripheral component interconnect (PCI) bus (see figure 5 and column 5 lines 60-61, PCI bus 124);

A vision accelerator subsystem coupled to the local PCI bus (see figure 5, camera 110, PCI bus 124), the vision accelerator subsystem including a processing accelerator and at least one image memory interface with the processing accelerator (see figure 5, camera 110, 111, 113, 115, serial interface 200, bridge 148, PCI bus 126 and column 7 lines 49-58, wherein the camera comprising 111, 113, 115 for processing images and transfer data to system 120 via serial interface 190, bridge 148, PCI bus 126, North bridge 130);

A digitizer subsystem coupled to the local (PCI) bus(see figure 5 and column 10 lines 60-63, camera 110, comprising digitized image coupling to the PCI bus via the serial interface 190, bridge 148), the digitizer subsystem including a digitizer and at least one camera coupled to the digitizer (see figure 5, camera 110 comprising image device 11, ADC 113, reduction circuit); and

A vision central processing unit (CPU) subsystem coupled to the local (PCI) bus, the vision CPU subsystem including an embed vision system CPU (see figure 5, CPU 128, PCI bus 124), a host bus bridge for interface system CPU to the local (PCI) bus, system memory, at least one system peripheral (see figure 5, bridge 130, PCI bus 124, CPU 128, memory 132, peripheral input 144) , and a display controller for interface a

local display to the local PCI bus (see figure 5, video conference system 100' comprising computer 120' and column 8 lines 25-30, wherein the video conference system 100' comprising computer 120' for controlling display, resolution).

As for claim 37, Hsieh teaches a peripheral bus bridge coupled to the local PCI bus, wherein the peripheral bus bridge is adapted to be coupled to a host PCI bus within the PC that configurable vision processing system implemented as a PCI add-in extension board (see figure 5).

As for claims 39-40, Hsieh teaches PCI bus compliant with PCI specification standard, and the PCI specification teaches (IDSEL) line, PCI address line AD [15:11] as claimed.
